EDUCATION

PURDUE UNIVERSITY

Expected May 2028

Bachelor of Science in Computer Science, with a Minors in Artificial Intelligence/Machine learning, Mathematics and Statistics

SKILLS

Languages: Java, R, C, Python, SQL, R, Latex

Machine Learning: LSTM, Random Forest, NN, RF-DETR, and DINO v2 Development Tuning and Implementation

Tools and APIs: Splunk, Pandas, Yfinance API, Google Maps API, OpenAI Whisper, Roboflow, Gemini API, Scikit-Learn, Linux

CERTIFICATIONS AND AWARDS

Data Classification and Handling - Purdue University Data Mine

Applications in Data Science - Purdue University

Beekeeps Undergraduate Research Project - Voted highly distinguished project, and published in The Journal of Purdue Undergraduate Research snapshot

TECHNICAL PROJECTS AND EXPERIENCE

DATA SCIENTIST

SEAQR

Intern

May 2026 – Present

- **Developed, trained, and tuned visual models** to detect anomalous flying objects through a host of data analysis techniques identifying objects that behave abnormally for tracking and identification purposes.
- **Consistent tracking** of objects **2 or more pixels wide** on 1080p footage, extracting over 1 million instances of objects that are used to **train vision models** for real time object identification and tracking.

SALES PREDICTION MODEL

PeakBrands LLC

Intern

May 2025 – July 2025

- Built a product **catalog enrichment tool** using **Selenium and Pandas** to scrape and analyze pricing data for **8,000+ listings**.
- Identified 100+ products with **high return potential** using analysis techniques.

UNDERGRADUATE DATA SCIENCE RESEARCH

Allison Transmissions

Researcher

Oct 2024 – May 2025

- Engineered a Python optimization script that **compresses GPS datasets** by **85%** while retaining critical resolution, such as turns, city travel, and erratic movements, in turn significantly reducing API costs and latency.
- **Automated geocoding** of data points based on state and country, while **extracting data** such as elevation and road type using external **APIs** such as **Google Maps' API**

UNDERGRADUATE DATA SCIENCE RESEARCH

Elevance Health

Researcher

Aug 2025-Present

- Developed a Machine Learning model utilizing the **Splunk API** to analyze **Billions of DNS logs**, successfully detecting and **flagging malicious activities** such as DNS tunneling and site spoofing.
- Identified over 10,000 suspicious events logged on the DNS servers over the course of a month for further human review.

PERSONAL PROJECTS

DRONE DETECTION

Bay Area, California

Personal

Dec 2025 – Present

- Designed a system that uses **frame differencing** to **identify drones, planes**, and other **unidentified flying objects** using cell phone cameras and **telemetry to triangulate the flying objects' positions**.

AI ASSISTANT

Indianapolis Indiana

Personal

May 2025 – present

- Architected and built an application using **Kivy(frontend)** and **Python(backend)** that utilized **OpenAI's Whisper** model to **process conversations and transcribe them**
- **Extracts actionable items** such as **events, meetings, to-do items**, summarized conversations, and adds them to an event calendar

LEADERSHIP

PURDUE STUDENT GOVERNMENT AND MIXED MEDIA TREASURER

Engagement Committee

Director

November 2024 – May 2026

- As **Director** of the **Engagement Committee**, I organized and ran multiple events, **allocated student government resources** efficiently, and built a community among my peers at the new Purdue campus in Indianapolis
- Raised over **\$40,000+** in funding for the **Mixed Media Club** to buy camera equipment and filmmaking materials
